

**Change ID: 5.1-25**

## ***Route designator suffix***

### ***Summary***

It is proposed to remove from the list of route designators suffix the letters Y and Z, which are no longer mentioned in the ICAO Annex 11.

### ***Background***

According to the ICAO Annex 11, the route designators may be composed by a prefix, a designator letter, a number and a suffix. The suffix is used to indicate characteristics of a route portion, such as advisory service only or RNP status. Therefore, the suffix is modelled in AIXM 5.0 as an attribute of the [RoutePortionUsage](#)

### ***Rationale for the change***

Annex 11 does no longer include the letters concerning turns on RNP 1 routes - Y and Z. The only allowable values remain F and G. Therefore, it is proposed to modify accordingly the [CodeRouteDesignatorSuffixType](#) list of values.

### ***Change proposal details***

Remove the values Z and Y from the CodeRouteDesignatorSuffixType enumeration.
