

*Global Harmonization
Through Collaboration*

The Importance of AIM and the Operational Concept

*Presented By: Michael Hohm
International Civil
Aviation Organization*

Date: August 28, 2012

**Federal Aviation
Administration**

**AIR TRANSPORTATION INFORMATION
EXCHANGE CONFERENCE - (FEATURING
AIXM, WXXM AND FIXM)**

August 28, 2012 - August 31, 2012
NOAA Auditorium and Science Center
Silver Spring, Maryland

Flightplan

Air Transportation Information
Exchange Conference - (featuring
AIXM, WXXM and FIXM)

- Background
- AIM Concept
- Relationship to other developments
- Challenge

Reasons for change

Air Transportation Information
Exchange Conference - (featuring
AIXM, WXXM and FIXM)

- Long coordination periods
- Late notified updates on NOTAM
- Rigidly defined products
- Need to display information on graphical displays
- Lack of integration across domains

Concept Development

Air Transportation Information
Exchange Conference - (featuring
AIXM, WXXM and FIXM)

- 2003 – Global Air Traffic Management Operational Concept (Doc 9854)
- 2008 – Manual on Air Traffic Management System Requirements (Doc 9882)
- 2011 – Flight and Flow – Information for a collaborative environment (FF-ICE)
- 2012 – AIM Operational Concept

.....and others....

Operational Concept vs CONOPS

Air Transportation Information
Exchange Conference - (featuring
AIXM, WXXM and FIXM)

An Operational Concept:

- Provides high level description of the target concept
- Informs the stakeholders of the system how the system will function in practice and the expected benefits
- Describes the functions of the system as well as the interactions of the system users.

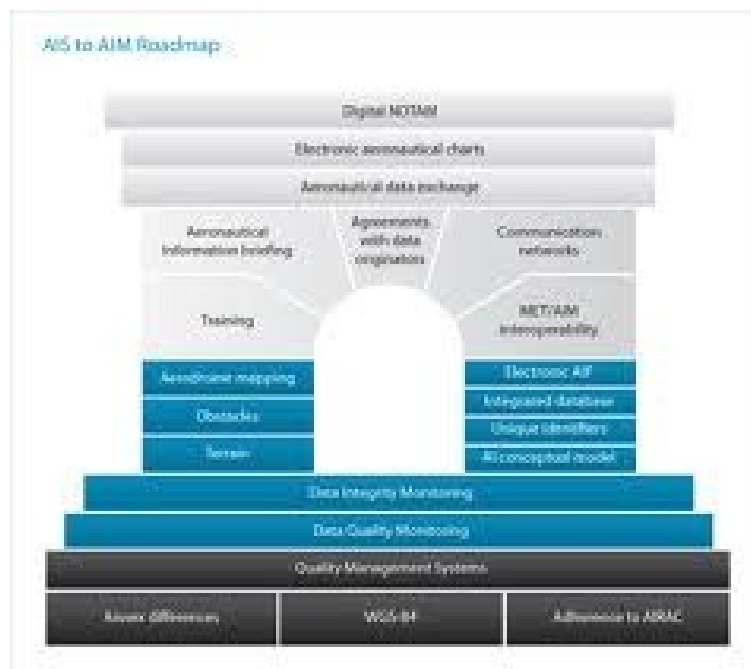

A Concept of Operations (CONOPS):

- Describes the characteristics of a proposed system from the viewpoint of an individual who will use that system
- Evolves from a concept
- It is used to articulate the quantitative and qualitative system characteristics
- Is not an implementation or transition plan itself

The Need for a Concept

Air Transportation Information Exchange Conference - (featuring AIM, WXXM and FIXM)

- Current roadmap digitized AIS products
- “Building without a blueprint”
- Integration with other services not specified

Need for an AIM Operational Concept

Objectives – the “big” questions

- What is the Scope of the AIM domain?
- What is the role of AIM ?
- What are the expected benefits ?
- What are the functions of AIM ?
- What is the relationship to other entities ?
- What are the Products and Services of AIM ?
- What is the future of messaging and operational reporting?
- What is the future of the AIRAC cycle?

Objectives – The “Aim” of the exercise

Air Transportation Information
Exchange Conference - (featuring
AIXM, WXXM and FIXM)

The Operational Concept should:

- Serve as overarching guidance for roadmap development
- Serve as a foundation for SARP development
- Provide a unifying vision as to how AIM will evolve
- Develop consensus on how the “big questions” will be addressed
- Inform the larger community

Information Domains

Air Transportation Information
Exchange Conference - (featuring
AIXM, WXXM and FIXM)

- AIM is one of multiple information domains
- Domains tend to overlap or otherwise influence other domains

Domain of AIM Information

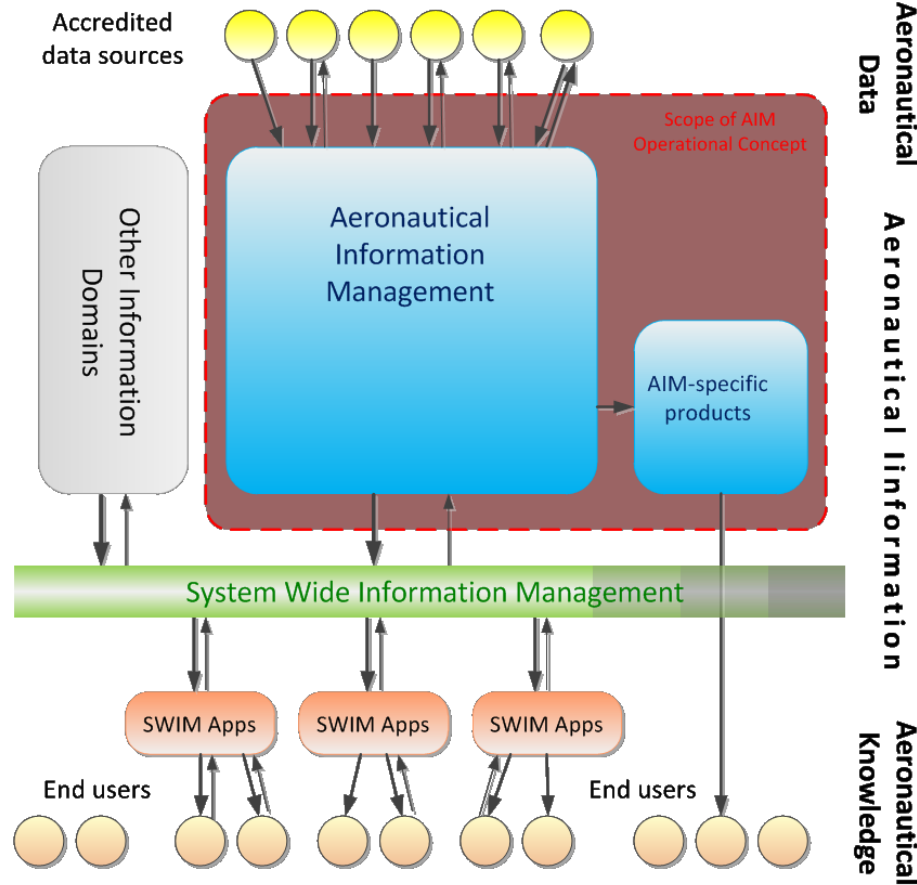

Air Transportation Information
Exchange Conference - (featuring
AIXM, WXXM and FIXM)

- Provides the underlying geospatial reference for the information assembled across the SWIM infrastructure
- consists of the features required to fully describe:
 - the Air Navigation Infrastructure
 - underlying terrain and cultural features

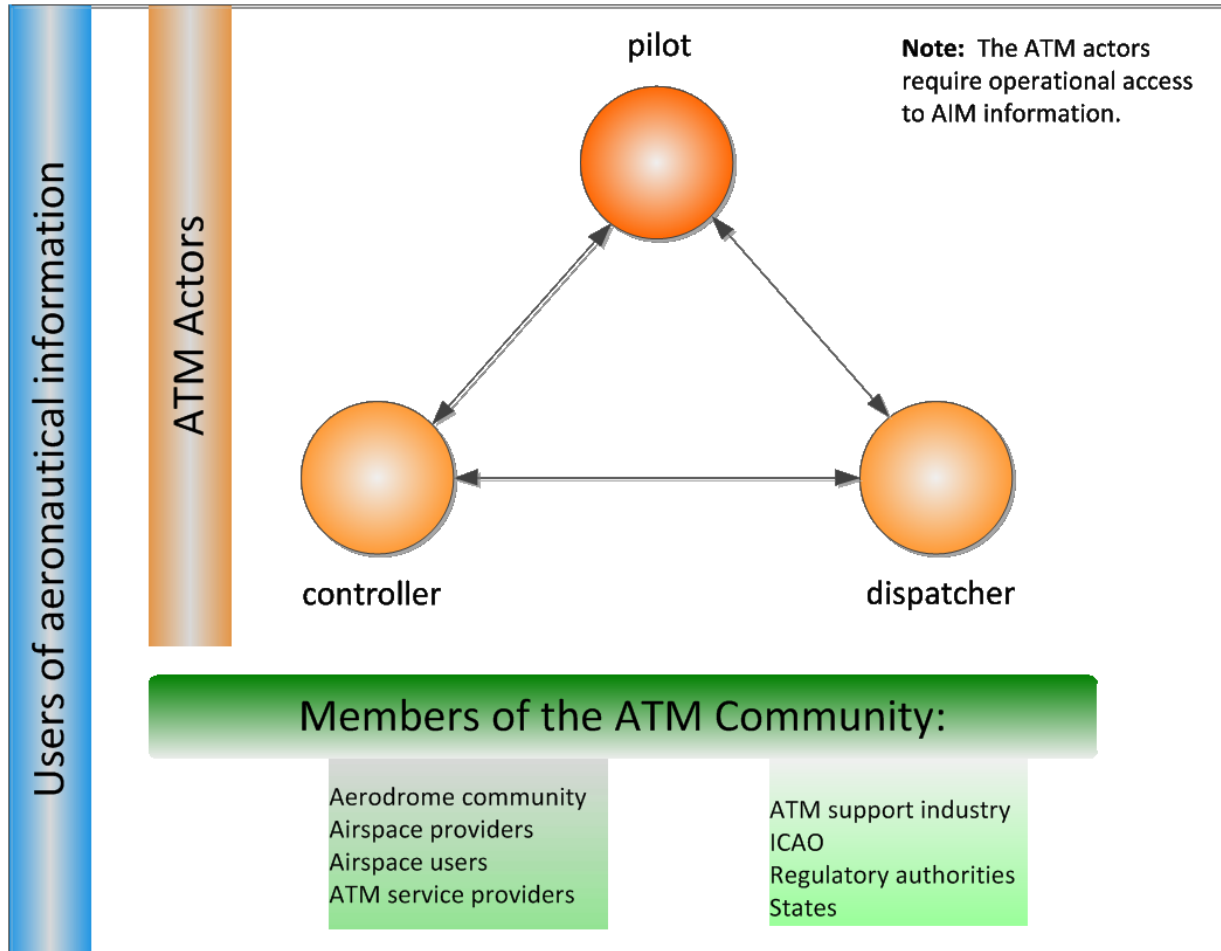

The Scope of the AIM Concept

- AIM in the larger picture

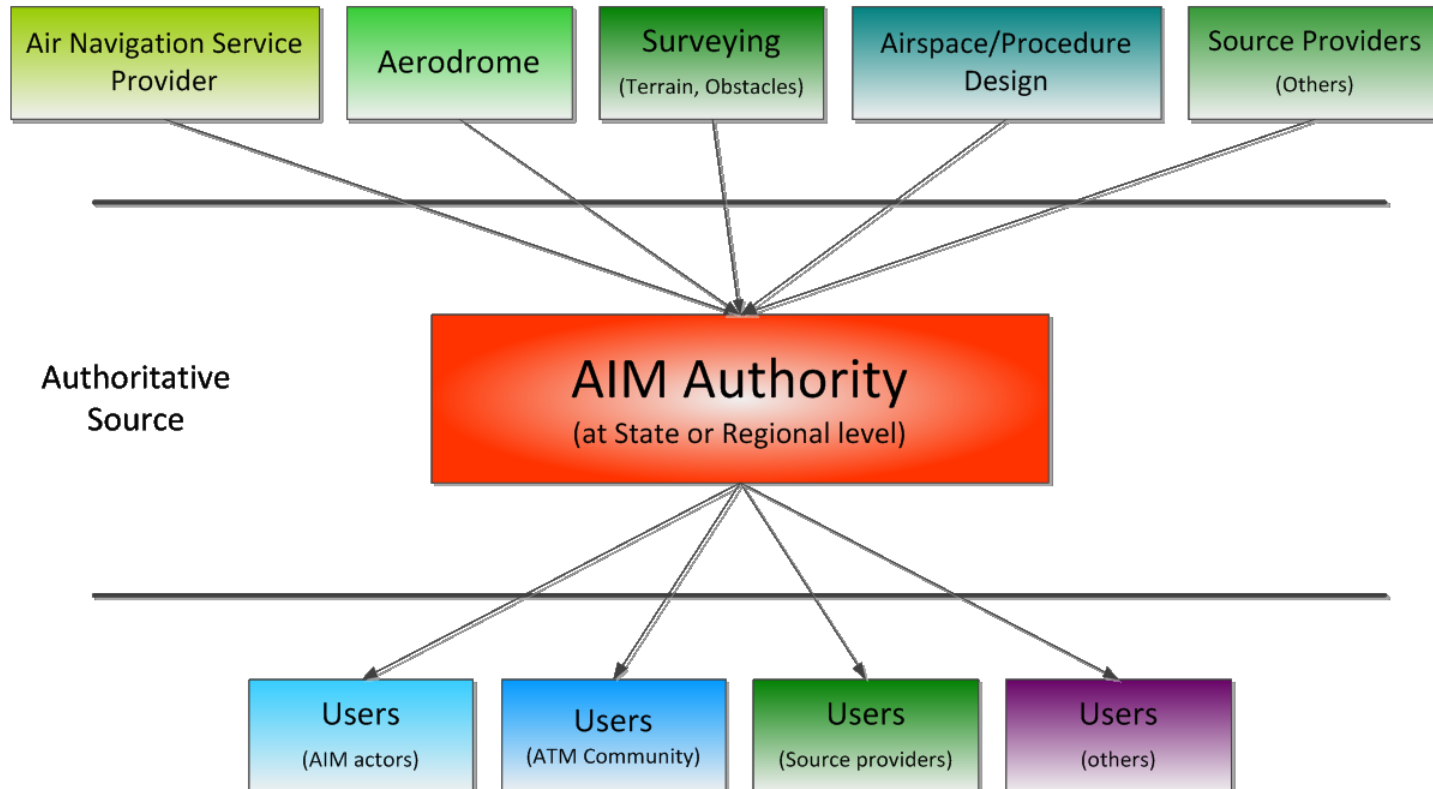

Who are the Users?

AIM Interfaces

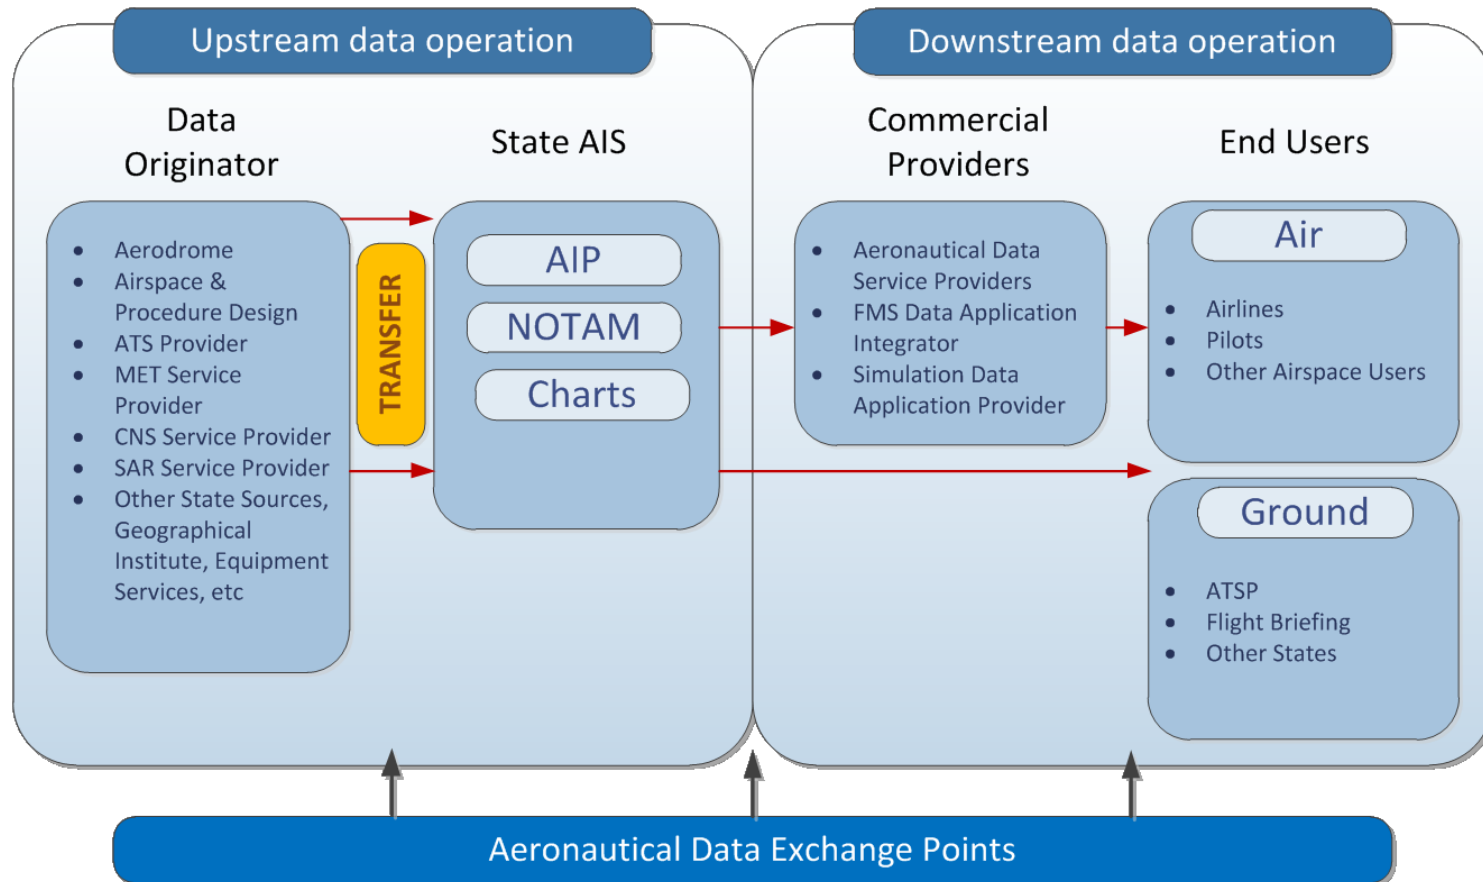

Accredited Provider(s) of AIM source data

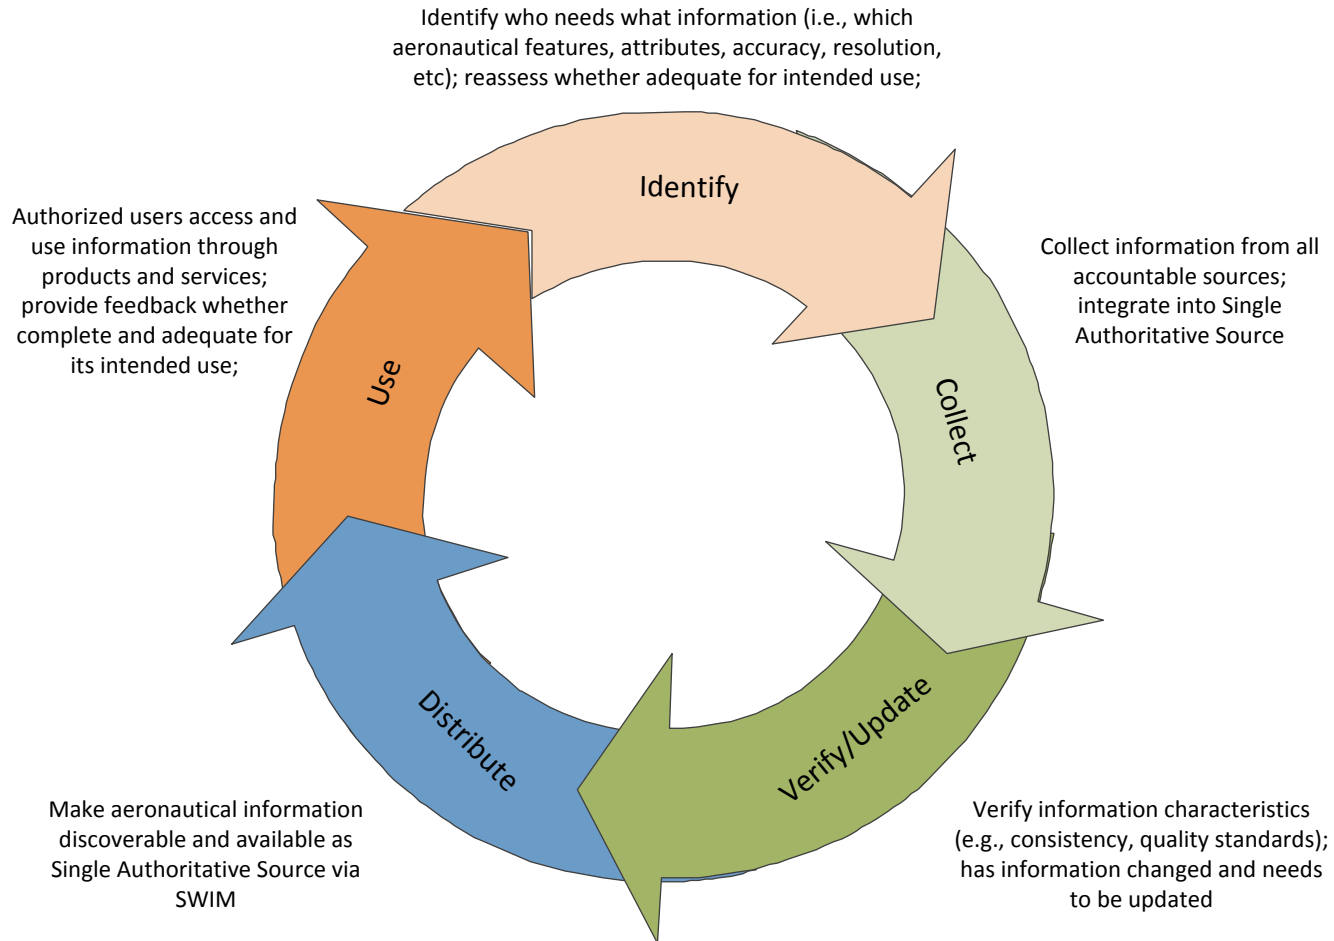

Consumers of AIM information

The information chain

Information Lifecycle

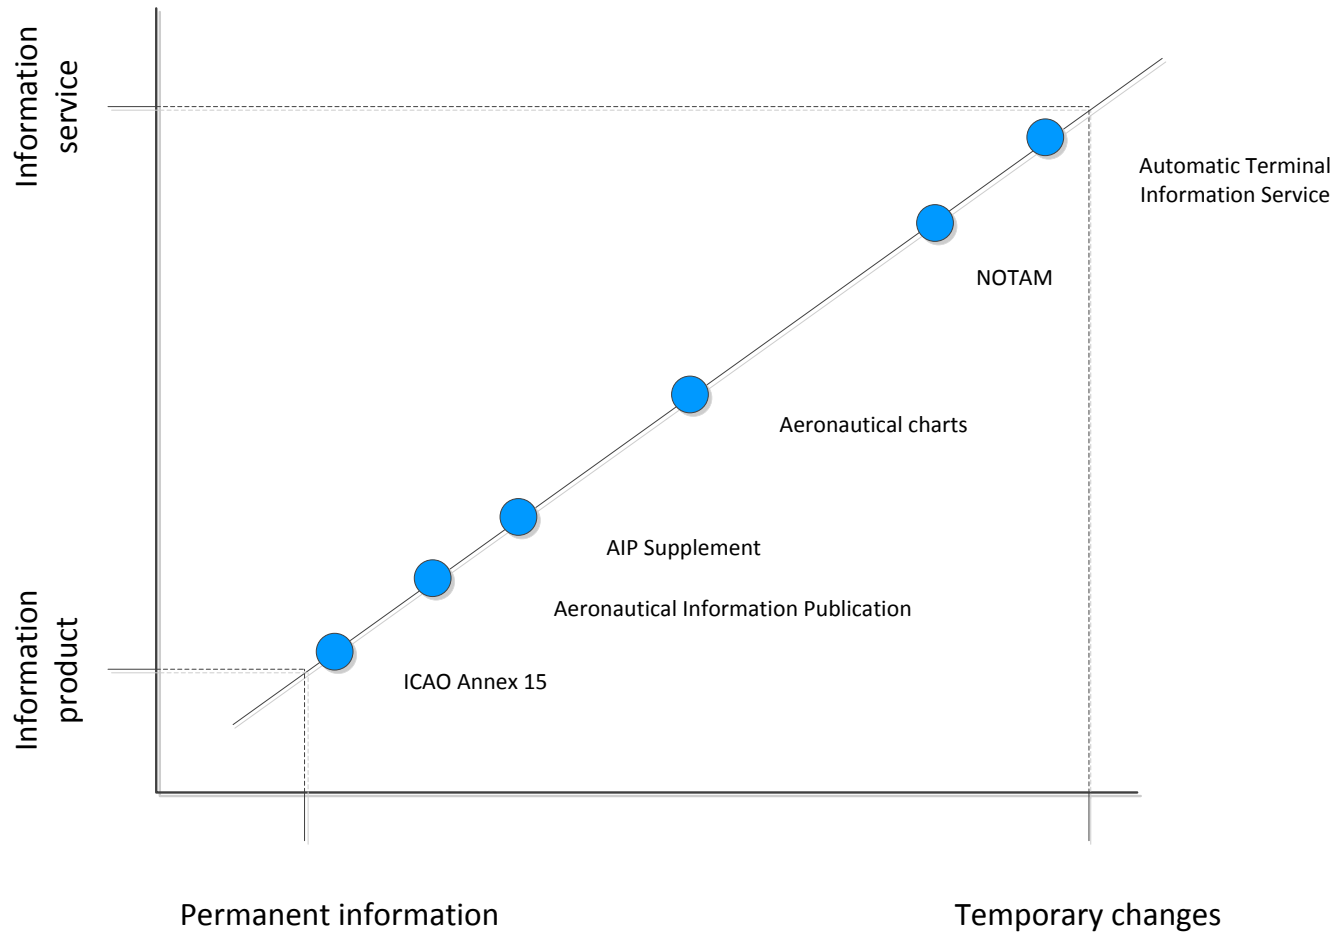

Evolution from Products to Service Orientation

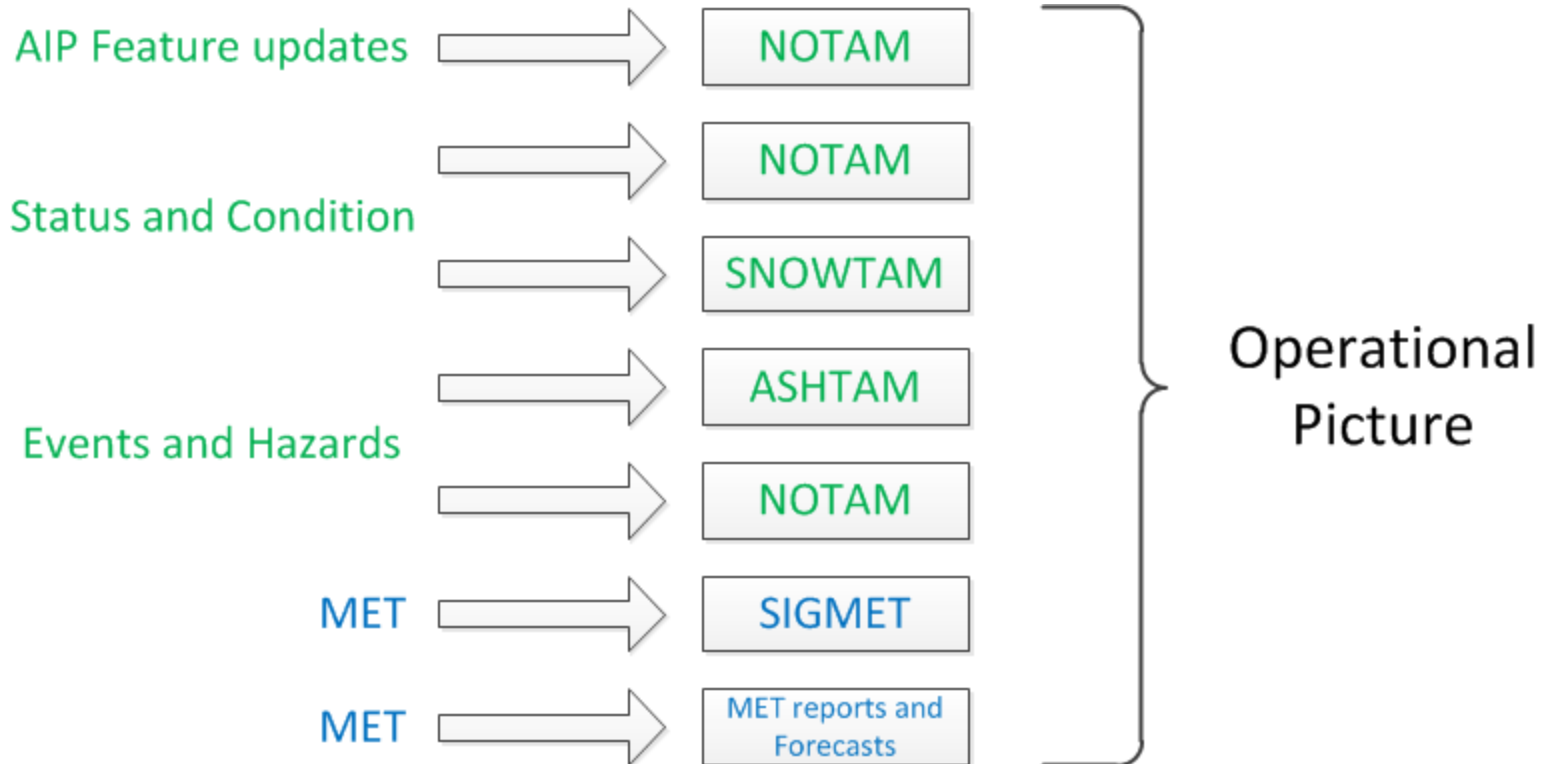

Temporality	<i>Planning and Reference</i>	<i>Pre-flight</i>	<i>In-flight</i>	<i>Post-flight</i>
Current description	Static	Dynamic		
Current AIS products	AIP AIP Supplement AIC Charts (some of which are used in-flight)	NOTAM SNOWTAM ASHTAM PIB	No definitive AIS products; Updates are disseminated by voice (and data link)	No specific AIS products; Opportunity for pilots to provide ad-hoc feedback
Future AIM applications	Baseline	Updates		Analysis of single and aggregate trajectories for systemic improvements, as per Performance Based Methodology
	Authoritative Source (aggregating information from accredited sources)	Fully integrated and up-to-date Pre-flight Information Briefing	Critical information disseminated via data link	

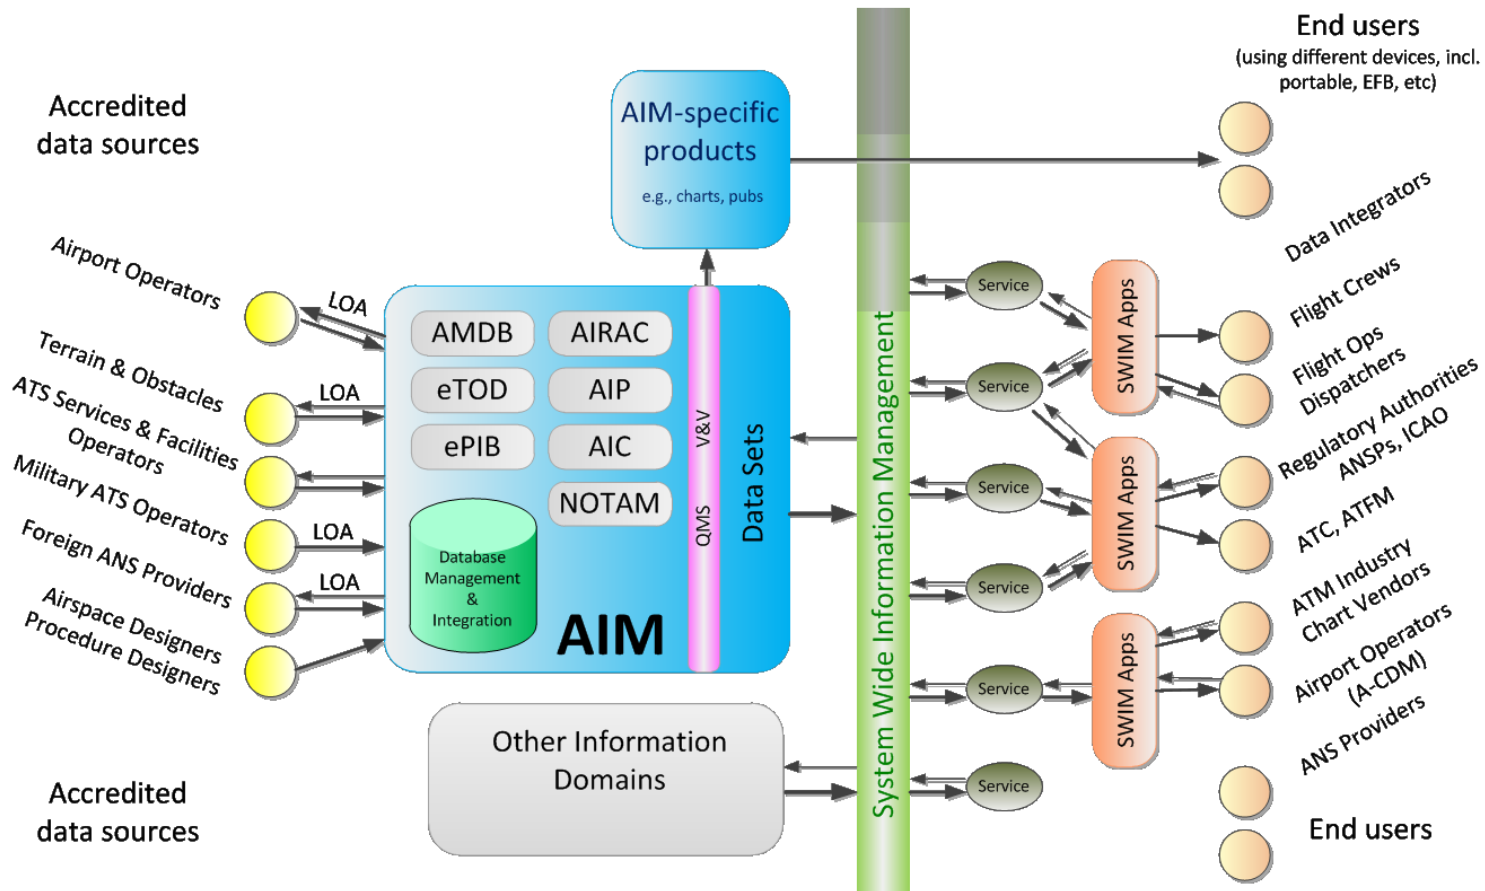

Temporality

Operational reporting – the current picture

Information from Source to user

Summary

Air Transportation Information
Exchange Conference - (featuring
AIXM, WXXM and FIXM)

- AIM is one DOMAIN under concept development
- The Concept is an important unifying element ensuring that “everyone is on the same page”
- There is a need to look at how information will be aggregated across domains for the benefit of improved operational awareness.
- Current roadmaps are very “domain specific”
- More detail is need for effective transition planning.
- Not all aspects are currently mapped in the ASBU framework
- CONOPS development should focus on the user perspective
